JUDGE COMPARISON NOTES - Team Nimbus vs Team LumenPath

Judge: Kavita Iyer (judging panel; no connection to either team)
Date: 2026-11-19 09:30 IST

OBSERVATIONS

1. Nimbus's teaser (published 2026-11-18 11:20), at 0:41, shows a debug overlay printing the function name calcluate_safety_score (sic). LumenPath's private build prints the same misspelled name.
2. Nimbus's demo dataset header contains the string LUMEN-SEED-7731, the seed used in LumenPath's sample data.
3. The route-scoring screen layout and the labels on the score panel are the same in both projects.
4. Nimbus says it developed NimbusNav independently over three weeks and was "inspired" by LumenPath's public v0.6 preview from 6 November.
5. Nimbus's repository (hacksprint-nimbus/nimbusnav on git.bce.example) shows its FIRST commit, a91c3f0, at 2026-11-18 00:31:14, containing 409 files. Nimbus added 11 files of its own in later commits.

JUDGE'S CAUTION

Matching names and seeds show that code or data was copied. They do not show how it reached Nimbus or who sent it. Do not assume that LumenPath's public preview and its private repository are the same thing.
